PROFILE

Software Development student building backends in Python and Java. Developed FastAPI services for connected devices and a billing API in Spring Boot, with automated tests for payment handling and data integrity.

TECHNICAL SKILLS

Languages:	Python, Java, JavaScript, SQL
Additional Languages:	Kotlin, C++
Backend:	FastAPI, Spring Boot, REST APIs, Spring Data JPA, JDBC, Maven
Databases:	PostgreSQL, MySQL, Flyway
Testing:	pytest, JUnit 5
DevOps / Tools:	Docker, AWS EC2, Git, GitHub, Render, Neon PostgreSQL
Frontend:	HTML, CSS, React, Bootstrap
Familiar With:	PHP, Laravel, Node.js, MongoDB

PROJECTS

BILLING PLATFORM API

Developed a Stripe-inspired billing backend using Java, Spring Boot, and PostgreSQL, with REST APIs for customers, products, prices, subscriptions, and payment intents.

Implemented subscription lifecycle rules, payment-intent state transitions, input validation, structured API error responses, and database constraints.

Managed schema evolution with Flyway migrations and deployed the backend separately using Docker, Render, and Neon PostgreSQL.

Built automated tests for API and domain behaviour using JUnit 5.

Tech: Java, Spring Boot, REST API, Spring Web, Spring Data JPA, PostgreSQL, Flyway, Render, Neon, JavaScript

UNISTOW

Built a Python booking service for a campus locker controlled by a Raspberry Pi. Integrated Stripe Checkout in test mode and restricted unlocking to the renter during the paid period.

Verified webhook signatures and tested duplicate and out-of-order notifications to ensure a late event could not cancel a paid booking.

Tech: Python, FastAPI, PostgreSQL, Stripe Checkout, PubNub, Raspberry Pi

TEMPSAFE

Developed the Python backend for a prototype medication box in a team of three. The FastAPI service receives temperature readings over MQTT and acknowledges each one only after MySQL has stored it.

Handled retries after a lost acknowledgement without duplicating readings. Used pytest to verify that a conflicting retry preserves the original measurement.

Tech: Python, FastAPI, MQTT, SQLAlchemy, MySQL, pytest

SUPERMARKET STORE SYSTEM (CLIENT-SERVER)

Collaborated in a team to design and implement a Java client-server supermarket management system using a custom JSON protocol over TCP. Built a multithreaded server for concurrent client handling, DAO-based persistence with JDBC and MySQL, structured success/error responses, image upload and retrieval, and automated tests for validation, persistence, routing, protocol handling, and file transfers.

Tech: Java 17, Maven, JDBC, MySQL, Jackson, TCP sockets, ExecutorService, JUnit 5

WORLD CUP 2026 MEXICO GUIDE

Built an interactive web application integrating Google Maps, Places and Directions APIs, live weather and currency APIs, route planning, nearby-place search, and PWA functionality.

Tech: Vanilla JavaScript, ES Modules, HTML, CSS, Google Maps/Places/Directions APIs, Open-Meteo API, Frankfurter API, PWA

EDUCATION

Sep 2024 – Present	BSc (Hons) Computing / Software Development Dundalk Institute of Technology Expected graduation: 2028
Sep 2023 – May 2024	Diploma in Software Development (QQI Level 5) Drogheda Institute of Further Education
Sep 2019 – Oct 2021	Geodesy (Incomplete Degree) Kyiv National University of Construction and Architecture (KNUBA), Kyiv

ADDITIONAL EXPERIENCE

Edwards Lifesciences, Limerick, Ireland — Cleaner (Cleanroom Environment) · Jul–Oct 2022

McDonald's, Kyiv, Ukraine — Crew Member · Sep 2021–Mar 2022
