PROFILE

Backend-focused developer building REST APIs and database-backed systems using Java, Spring Boot, PostgreSQL, and SQL.

Currently developing a billing-focused full-stack platform with a separated frontend, deployed Spring Boot backend API, online PostgreSQL database, Flyway migrations, and secure environment-based configuration.

Strong analytical thinker with a systematic approach to problem solving, actively building backend systems beyond coursework and seeking a backend-focused placement.

TECHNICAL SKILLS

Backend Development:	Java, Spring Boot, REST API Development, JDBC, Maven
Databases:	PostgreSQL, MySQL, Flyway, SQL
Deployment & DevOps:	Docker, Render, Neon PostgreSQL, Environment Variables / Secrets, GitHub
Frontend & Web:	HTML, CSS, Vanilla JavaScript, React, Bootstrap
Testing:	JUnit
Familiar With:	PHP, Laravel, Node.js, MongoDB, Python, C++, Kotlin

PROJECTS

BILLING PLATFORM DEMO

Developed a full-stack billing-focused application with a deployed frontend, Spring Boot backend API, and PostgreSQL database. Built REST API endpoints for customer creation and retrieval, integrated PostgreSQL with Flyway migrations, and deployed the backend separately on Render with database credentials managed through environment variables.

Tech: Java, Spring Boot, REST API, Spring Web, Spring Data JPA, PostgreSQL, Flyway, Render, Neon, JavaScript

SUPERMARKET STORE SYSTEM (CLIENT-SERVER)

Designed and implemented a Java client-server supermarket management system using a custom JSON protocol over TCP. Built a multithreaded server for concurrent client handling, DAO-based persistence with JDBC and MySQL, structured success/error responses, image upload and retrieval, and automated tests for validation, persistence, routing, protocol handling, and file transfers.

Tech: Java 17, Maven, JDBC, MySQL, Jackson, TCP sockets, ExecutorService, JUnit 5

WORLD CUP 2026 MEXICO GUIDE

Built an interactive travel guide web application for tourists visiting Mexico during the FIFA World Cup 2026. Integrated Google Maps, Places, and Directions APIs for stadium exploration, nearby place search, route planning, and custom markers. Added live weather data, currency conversion, responsive layout, and PWA support with a service worker.

Tech: Vanilla JavaScript, ES Modules, HTML, CSS, Google Maps/Places/Directions APIs, Open-Meteo API, Frankfurter API, PWA

EDUCATION

Sep 2024 – Present	BSc (Hons) Computing / Software Development Dundalk Institute of Technology
Sep 2023 – May 2024	Diploma in Software Development (QQI Level 5) Drogheda Institute of Further Education
Sep 2019 – Oct 2021	Geodesy (Incomplete Degree) Kyiv National University of Construction and Architecture (KNUBA), Kyiv
